

Company Profile

Custom software, AI, automation, integrations, and cloud solutions

AUREVIXA TECHNOLOGIES

Custom Software | AI | Automation | Integrations | Cloud

Technology built around your business.

Who We Are

Practical technology designed around how businesses actually work.

Aurevixa is a technology solutions company that designs and builds custom digital systems around real business needs. We begin by understanding the workflow, pain points, users, and goals - then determine the right combination of software, AI, automation, integrations, data, and cloud technologies.

Our role is to help turn operational challenges and new product ideas into usable, scalable technology - from discovery and design through development, deployment, support, and continuous improvement.

OUR POSITIONING

Technology built around your business.

What We Build

Custom Software

Web applications, internal systems, CRM, portals, dashboards, SaaS platforms, and operational tools.

Websites & E-Commerce

Corporate websites, landing pages, online stores, booking sites, membership platforms, and self-service experiences.

Mobile Applications

Customer, employee, field-service, delivery, booking, sales, inventory, and internal mobile apps.

AI Solutions

AI chatbots, voice agents, knowledge assistants, document processing, enterprise search, and AI copilots.

Automation

Workflow automation, customer follow-ups, approvals, onboarding, reporting, notifications, and repetitive back-office tasks.

Integrations & Cloud

APIs, system connections, data synchronization, deployment, monitoring, maintenance, and ongoing enhancements.

The Problems We Help Solve

We focus on friction that slows teams down or limits visibility.

Manual Work Too much manual encoding, repetitive admin, and hand-prepared reports.	Disconnected Tools Processes spread across spreadsheets, email, chat, and systems that do not communicate.
Customer Response Slow follow-up, delayed updates, and inconsistent customer communication.	Limited Visibility Difficulty tracking projects, customers, orders, applications, requests, or performance in real time.
Legacy Systems Software that is difficult to use, maintain, integrate, or scale.	New Digital Products Ideas that need to become a working MVP, proof of concept, or scalable product.

Our Approach

We select technology based on the business problem, rather than forcing every client into a fixed product or template. A solution may be a web application, workflow automation, AI agent, integration layer, mobile app, data platform, or a combination of several components.

1. Discover Understand the current process, goals, users, constraints, and priorities.	2. Design Define the workflow, interface, architecture, integrations, and solution scope.	3. Build Develop in clear stages and keep implementation aligned with agreed requirements.
4. Test Perform quality assurance and client acceptance testing.	5. Launch Deploy the approved solution and support rollout.	6. Improve Maintain, automate, optimize, and expand as the business grows.

How We Work With Clients

Flexible engagement models for different stages and needs.

Fixed Project	Best when the scope and deliverables are clearly defined.
MVP / Proof of Concept	Best for validating a new product, workflow, or AI use case before a larger investment.
Monthly Retainer	Best for continuous development, automation, support, and feature improvements.
Dedicated Team	Best for organizations that need ongoing engineering capacity without building a full internal team.
Maintenance & Support	Best for systems that need monitoring, fixes, upgrades, and incremental enhancements after launch.

What Clients Can Expect

- Solutions designed around the client's process, not around a pre-built template.
- The ability to combine software, AI, automation, integrations, data, and cloud infrastructure in one solution.
- A focus on practical business outcomes such as faster processing, fewer manual tasks, and better visibility.
- Systems designed with scalability, usability, and maintainability in mind.
- Support across the full lifecycle: discovery, design, development, testing, deployment, and continuous improvement.

From Manual Workflow to Automated System

A simple example of how Aurevixa approaches transformation.

A team receives requests through email, manually enters information into spreadsheets, assigns work through chat, follows up with customers, and prepares reports by hand.

A redesigned automated flow

REQUEST received	CAPTURE information	CREATE task	ASSIGN owner
NOTIFY customer	TRACK status	UPDATE dashboard	GENERATE report

The exact solution is chosen after discovery. The objective is not automation for its own sake - it is to reduce unnecessary work, improve visibility, and make the process easier to operate and scale.

Brand Meaning

Aurevixa is an invented brand name built around the ideas of value, innovation, adaptability, and forward movement. The name reflects a company that applies technology where it creates practical value and designs solutions around the client rather than around a single product.

Start With the Business Problem

Discovery is the first step toward the right solution.

The best starting point is a discovery discussion where we review the current workflow, pain points, desired outcome, users, existing systems, and priorities. From there, Aurevixa can prepare a recommended solution, project scope, estimated timeline, and commercial proposal.

LET US BUILD AROUND YOUR BUSINESS

Tell us the problem you want to solve. We will help design the technology that solves it.
